                                                                                                                                                                                                                                                                                                                                                           The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48625), comprising a membrane translocation domain (AAM48620-AAM48625) which comprises from 6-15 mino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKOpeta kinase activation and subsequent decreased phosphorylation of IkAOpeta kinase activation and subsequent decreased phosphorylation of IkAOpeta kinase activation or cancer, psoriasis, rheumatoid arthritis, ung inflammatory discorders, e.g. asthma, ung inflammatorial inflammatory discorders, e.g. asthma, contominated diseases such as lugus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis; chalmagiscreasia. The compounds are also useful for treating and ataxia continuation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM4862), comprising a membrane translocation domain (AAM48620-AAM48619). The AAM48661 which comprises from 6-15 anino acid residues, fused to a NEMO binding sequence (AAM48519). The antiinflammatory compounds have antiasthmatic, cytostatic, antipscriatio, antiheumatic, antiarthrile, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB compounds act as selective inhibitors of cytokine-mediated NFKappaB compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psorfiasis, rheumatoid arthritis, compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammatonis, unflammatory bowel disease, sepsis, vasculitis, osteoparosis, unsitials, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; viral infections, and ataxia pro-inflammatory responses such as allevasis, urbating, anaphylaxis, crug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Sequence 16, Application US/09847940B
; Patent No. US20020156000A1
; GENERAL INFORMATION:
    APPLICANT: May, Michael J.
    APPLICANT: May, Michael J.
    APPLICANT: Ghosh, Sankar
    TITLE OF INVENTION: ANTI-INFLAMMATORY COMPOUNDS AND USES THEREOF
    FILE REPERENCE: PPI-117CP
    CURRENT APPLICATION NUMBER: US/09/847,940B
    CURRENT FILING DATE: 2001-05-02
    PRIOR APPLICATION NUMBER: 09/643,260
    PRIOR FILING DATE: 2000-08-22
    NUMBER OF SEQ ID NOS: 27
    SOFTWARE: PatentIn Ver. 2.0
    SEQ ID NO 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   OTHER INFORMATION: Description of Artificial Sequence: NBD mutants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB70312). The compound as acts through selective inhibition of (ABB70313). The compound has acts through selective inhibition of cytokine-mediated NF-kB activation by blocking the interaction of NEMO interaction results in inhibition of IKKDeta kinase activation and subsequent decreased phosphorylation of IKADeta kinase activation and chronic inflammation, by down-regulating the expression of E-selectin on leukocytes or by blocking obsecolast differentiation. The compound is useful in treating NF-kB mediated autoimmune disease, transplant rejection, osteoporosis, cancer, Alzheimer's disease, atherosclerosis, a viral infection or ataxia telangiectasia. The inflammatory disorder is asthma, allergies, uricaria, anaphylaxis, cutaneous inflammatory disorder is asthma, allergies, cheumatoria arthritis, osteoarthritis, psoriatic arthritis, lupus and bursitis. The inflammatory disorder may also be dermatitis, erzema, psoriatic arthritis, lupus and cursianis, osteoarthritis, psoriatic arthritis, lupus and cursianis, osteoarthritis, psoriatic arthritis, lupus and cursianis, osteoarthritis, sporiatic arthritis, lupus and colymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, caused by Epstein-barr, cytomegalovirus or herpes simplex. Other caused by Epstein-barr, cytomegalovirus context dermatitis, and anaphylaxis, drug and food sensitivity, contact dermatitis, and influenza. The compound may be used to replace corricosteroids in minionsuppression in which corricosteroids are used, including invisorion and influenza and encer therapy. Also for disorder immunosuppression in which corricosteroids are used, include life and encer therapy. Also for disorder and influen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antiinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEWO binding domain of IKKOeta.
                                                                                                                                                                           Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting a cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The antiinflammatory compounds have antiasthmatic, Cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallargic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB the NEWO binding domain that results in inhibition of IKKDeta is activation and subsequent decreased phosphorylation of IKKDeta kinase activation and subsequent decreased phosphorylation of IKRDeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, busistis autoimmune disease such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia relangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

AMM48620-AMM48645), comprising a membrane translocation domain.

(AAM48620-AMM48645), comprising a membrane translocation domain.

(AAM48620-AMM48619). The antiinflammatory compounds have antiathmatic, antipacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB corprotion by blocking interaction of IkappaB kinase beta (IKKObeta) at the NEWO binding domain that results in inhibition of IKKOpeta at the NEWO binding domain that results in inhibition of IkappaB. The activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatoin of IkappaB. The activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatoid arthritis, osteoarthitis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, and ataxia telandiscial. The compounds are also useful for treating contains and ataxia.
                                                                                                                                                                                                                                                                                                                             antificumatic; antiarchritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NRkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                               Antlinflammatory, antiasthmatic, cytostatic, antipsoriatic, nootropic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

The invention relates to an antiinflammatory compound (especially AMM48629-AMM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, ortostatic, antipocriatic, antirheumatic, antiarthritic, descepathic, corpounds act as selective, inhibitors of cytokine-mediated NFRappas compounds act as selective inhibitors of cytokine-mediated NFRappas compounds act as selective inhibitors of cytokine-mediated NFRappas compounds are as selective inhibitors of cytokine-mediated NFRappas cortivation by blocking interaction of Ikappas kinase beta (IKKbeta kinase the NEMO binding domain that results in inhibition of IKKpeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, compounds are useful for treating inflammatory disorders, e.g. asthma, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; clangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxie, corpounds are also useful for treating and ataxia are bettive in the compounds are also useful for treating and pro-inflammatory responses such as allergies, urticaria, anaphylaxie, compounds are also useful for treating and ataxia and proper and as allergies, urticaria, anaphylaxie, archemical and anaphylaxie, and allergies and as allergies, urticaria, anaphylaxie, and allergies.
                                                                                                                                                        Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; derivation in neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Phillips K;

The NEMO binding domains are found on Ikapapa Kinase-abta (IKKDeta) and Ikappa Kinase-alpha (IKKAlpha) proteins. The antiinflammatory compounds of the invention are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKs such as IKKalpha or IKKbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; antiinflammatory compound; NEMO binding domain; NBD; IKKbeta;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel antiinflammatory peptide compounds comprising NEMO binding domain, useful for modulating NF kappaB induction in a cell and for treating NF-kappaB-mediated inflammation disorders e.g., asthma, psoriasis, vasculitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inflammatory disorders, autoimmue diseases, osteoporosis, cancer, Alzheimer's disease, atherosclerosis, viral infections, Ataxia telangiectasia, and for transplantation detection. The compounds of the invention block NF-kappaB induction by IKK but do not inhibit the basal activity of NF-kappaB. ABU08418-ABU08432 represent human

                                                                                                                                                                                                                                                                                                                                                          Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological, neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM486620-AMM48617) or AAM486465-AAM48657 or AAM486450 which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the NEMO binding domain that results in inhibition of IXABeta kinase activation and subsequent decreased phosphorylation of IXABeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, seconthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; ural infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an antiinflammatory compound (especially AMM48629-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48627) or AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48629-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antinflammatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NKappaB compounds act as selective inhibitors of cytokine-mediated NKappaB compounds and subsequent decreased phosphorytation of IKKObeta at the NEMO binding domain that results in inhibition of IKKObeta kinase activation and subsequent decreased phosphorytation of IKKOpeta in the NEMO binding domain decreased phosphorytation of IKKOpeta in activation and subsequent decreased phosphorytation of IKKOpeta in activation are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis,

osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, burstitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sumburn, aging and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48625) or AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antinflammator compounds have antisathmatic, cytostatic, antipsoriatic, antirheumatic, antiarchritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cytokine, NPkappaB; IkappaB kinase beta; IKKbeta; cancer; psoritasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Jalzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 compound comprising membrane translocation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antifheumatic; if antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEW binding domain; eczema; cytokine; NEKappaB; KappaB kinase beta; IKKDeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkKpeta kinase compounds are useful for teating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatory disorders, e.g. asthma, osteoarthritis, inflammatory bowel disease, sepsis, vasculities, bursitis, autoimmune diseases such as lupus, polymyalgia, soleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis, Alzheimer's disease; atherosclerosis, viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, utricaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

(AAM48525-AAM48619). The antinflammatory compounds have antiasthmatic, amino acid residues, fused to a NEWO binding sequence
(AAM48525-AAM48619). The antinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiasthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, cartisaterial, immunosuppressive, dermatological, neuroprotective, corpounds act as selective inhibitors of cytokine-mediated NRRappaB activation by blocking interaction of IkappaB insee beta (IKKbeta) at the NEWO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoparthritis, inflammatory bowel disease, sepsis, vasculitis, osteoporosis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, caranlomatosis, multiple sclerosis; transplant rejection; osteoporosis, clanapiectasia. The compounds are also useful for treating telangicctasia. The compounds as allergies, urticaria, anaphylaxis, chikisis, criticaliamatory responses such as allergies, urticaria, anaphylaxis, chikisis, the compounds are also useful for treating and critis; are compounds are also useful for treating and critis; and compounds are also useful for treating and critis; and compounds are also useful for treating and critis; and compounds are also useful for treating and critis; and compounds are also useful for treating and critis; and compounds are also useful for treating and critis; and critis and critis and critis and critis are also useful for treating and critis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatorid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain card residues, tused to a NEMO binding sequence (AAM48625-AAM48619). The antiinflammatory compounds have antisathmatic, cytosteric, antipacriatic, antirheumatic, antiarthatic, osteogethic, corpounds act as selective, inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB cativation by blocking interaction of IrappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoathritis, inflammatory bowel disease, sepsis, vasculitis, osteoathritis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatomis, multiple sclerosis, transplant rejection; osteoporoals, all antimer's disease; atherosclerosis, viral infections; and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKWbeta; cancer; psoriasis; rheumatorid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple solerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                 Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ataxia telangiectasia; allergy; anaphylaxis; arthritis

AMM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48619). The antinical parameters from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antinicheumatic, antiarthritic, osteopathic, antipacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB contropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB cativation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammation of IkappaB. The compounds are useful for treating inflammatory discorders, e.g. asthma, ung inflammation or cancer pooriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, all planeimer's disease, attensederosis, viral infections; and ataxia consideration; and ataxia consideration; and ataxia consideration; and ataxia consideration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirchemmatic, antiatchtic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NRappash; Itappash kinase beta; IKKDete; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                               domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                            Novel antiinflammatory compound comprising membrane translocation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an antiinflammatory compound (especially

The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620) comprising a membrane translocation domain characteristic actions of a mino acid residues, fused to a NEMO binding sequence (AAM48625-AAM48619). The antiinflammatory compounds have antisthmatic, cytostatic, antipheratic, antitheumatic, antiartherize, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds are as selective inhibitors of cytokine-mediated NFRappaB activation by blocking interaction of InappaB kinase beta (IKKbeta kinase the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKpeta kinase activation or cancer, psoriasis, rheumatory disorders, e.g. asthma, lung inflammaton or cancer, psoriasis, rheumatoid arthritis, orsteoarthritis, antiphe sclerosis, sepsis, vasculitis, orsteoarthritis, antiphe sclerosis; viral infection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; osteoporosis; clangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allorgies, unticaria, anaphylaxis, arrection; or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain, NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; csteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,

PIR_76:* 1: pir1:* 2: pir2:* 3: pir3:* 4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Species: Caenorhabditis elegans
C. Species: Caenorhabditis elegans
C. Species: Caenorhabditis elegans
C. Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 29-Oct-1999
C. Accession: T3269
R. Davidson, S.; Wohldmann, P.; Bauer, C.; O'Neal, D.
Submitted to the EMBL Data Library, December 1997
A. Description: The sequence of C. elegans cosmid F16B4.
A. Reference number: Z21208
A. Accession: T3269
A. Accession: T3269
A. Reference type: DNA
A. Molecule type: DNA
A. Molecule type: DNA
A. Residues: 1-362 CDAV>
A. Residues: 1-362 CDAV>
A. Cross-references: EMBL:AF039048; PIDN:AAB94233.1; GSPDB:GN00023; CESP:F16B4.2
A. Experimental source: strain Bristol N2; clone F16B4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 17139 Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS:
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFREENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 17139
LENGTH: 597

Sequence 4, Application US/09099124A

Patent No. 5939302

GENERAL INFORMATION:

APPLICANT: Goeddel, David V.

APPLICANT: Woronicz, John

TITLE OF INVENTION: IKK- Proteins, Nucleic Acids and Methods

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS:

ADDRESSER: SCIENCE & TECHNOLOGY LAW GROUP

STREET: 268 BUSH STREET, SUITE 3200

CITY: SAN FRANCISCO

CITY: SAN FRANCISCO

STATE: 74104

COUNTRY: USA

ZIP: 94104
